

NEWS UPDATE

New Gallery Feature for App Screenshot Viewing...

Project Code Counter
Designed for Mac OS (tv)

Platform: Mac OS (MacOS) | **Country:** ...

Finally, an Xcode & Swift Lines Developer!

NOTE: This app only works with Xcode (project and packages) to count. It will i programming language source code fil

Simply drop the folder containing your swift files and others for your project a Considers line counts in Swift Packages

Features: Once a project is selected or files and included Swift Packages in you far as file counts, it only performs line c filetypeps:

- Swift Files
- Swift Packages
- Markdown Files
- Database Files
- PDF Files
- Images

Charts: Various charts can depict file o packages.

File Drop Area
Drop Project Here
Drag the folder containing the '.xcodeproj' package.
Choose Project Folder...

File List
No Project Loaded
Drop your project folder or '.xcodeproj' package into the upper-left quadrant to inspect its files.

Charts
No Chart Data
Once a project is loaded, this chart will show how much each supported file type contributed to the total.

Welcome to Project Code Counter
This app scans your Xcode project folder to validate files, count supported types, and summarize Swift lines of code. For more details, open the Help menu.

Tips for Best Results

- **Select the parent folder:** Upload the folder that contains your project. This allows the app to map the file tree and locate items inside the .xcodeproj package.
- **Expect brief delays for packages:** These items are stored in your project's derived data, so they take a little longer to find and calculate.
- **Check external paths:** Files stored outside the project folder using absolute paths cannot be accessed or included in the total count.
- **Allow folder access:** macOS sandboxing requires your permission to view external files. Blocked items will appear under Access Denied and will be skipped.
